Specialized bike computer manual sport

Buying a new bike is oftentimes an expensive purchase. A used bike is a good alternative because it costs less than newer models. Used means it's had some wear and tear, so be wary. Follow this checklist of what to look for in a used bike before you buy. Where to Buy Where do you buy a used bike? Websites like eBay and Craigslist are sources for used bikes. Check classified ads, Facebook marketplace sites, consignment stores and yard sales. Online bike sites offer guides to models and pricing, so you can know what to expect and how to bargain with the price. Read ads and browse sporting goods stores to find what newer prices are to ensure you don't get overcharged on a used bike. Frame Inspect the frame of the bike. Small scratches and chips only affect the bike aesthetically, and you can always touch them up. Rusty frames and paint bubbles indicate corrosion and should be avoided. Look for cracks in bends in the tubes. Cracks can form under the bottom bracket so be sure to examine the frame joints. The frame should also fit your size. Sit on it and make sure it fits right and feels comfortable. Wheels and Tires When shopping for secondhand bikes for sale, check the wheels and tires. Lift the bike at each end to spin the tires. Look for any wobbling that could indicate a warped wheel. While these can be replaced later, it will be an additional cost and something you should consider. Squeeze the spokes together to make sure there is tight tension. Test the brakes to make sure they aren't worn out. Type of Bike Consider how you'll be riding the bike. Do you ride on the road or trails? Trail bikes are built for rugged rides on rough terrain, so they have wider tires and shock absorbers. Road bikes are lighter in design and usually have thinner tires. A racing bike is very light and streamlined. Look for hybrids if you'll be riding your bike on different surfaces. Drivetrain and Test-Drives Examine the drivetrain by testing the chain. If it pulls a little slack away from the chainring, it's probably okay. If there's a big gap, it could indicate that the drivetrain is worn out. Finally, take the bike for a test-drive to see how it handles on flat roads and hilly areas. If it rides good and feels right, it might be the right choice. MORE FROM QUESTIONS ANSWERED.NET Couple mountain biking Image Credit: Comstock Images/Stockbyte/Getty Images Specialized Bicycle Components produces a variety of bicycles and bicycle products, including computerized speedometers. With a touch of a button, these devices provide valuable information such as the time, the miles you've traveled, your speed and the temperature. To get information to display the way you want, and to get accurate estimates for your speedometer and odometer, you must go through an initial program to enter specific setup information. Start Setup You have only three keys to press: "start/stop," "mode" or "set." To start the setup procedure for the first time, simply press and hold the "start/stop" button for two seconds. If you want to reset the computer -- to erase current settings and start over with setup -- press the small button on the back of the computer unit. Language And Time For the first step of the setup, press the "mode" button to toggle through the possible languages. Press the "set" button to select the language you want. Time Next, the 12 vs. 24 hour clock option appears. Press "mode" to toggle back and forth between your options, and "set" to select the mode you want. Now the hour will appear on the screen. Press the "mode" button until the correct hour appears. Press the "set" button to select the hour. The minutes now light up. Press the "mode" button repeatedly until you reach the correct minute, and then press the "set" button. Tire Size The tire size options appear next. The screen will indicate "Bike 1" in the upper right corner of the screen and in the lower part of the screen show "26" x ". Use this screen to enter in your tire size if you have mountain bike tires that specify the size in inches. If you have a road bike and tire sizes are specified in mm, then press the set button to go to the next screen, which will display "Bike 2" in the upper right corner and show a tire size of "700 x " on the bottom of the screen. For either the mountain bike or road bike screen, simply press the "mode" button to toggle through possible tire width options. Press the "set" button to confirm and set the width that corresponds to the width specified on your tire. Kilometer Or Miles The display will indicate "ODO" on the bottom, and "km" in the upper right. Press the "mode" button to toggle through km and miles, and press "set" to select the unit of measurement you want to the odometer and speedometer to use. Odometer Next four zeros are displayed. You can enter in pre-existing or logged miles by pressing the mode button to toggle through 0 to 9 for the first digit. Press the "set" button to select, then continue to the second digit by toggling through 0 to 9 using the "mode" button and pressing "set" to select the correct digit. Continue until you have set all four digits. If you are satisfied with the odometer reading 0000, simply press the "set" button four times. Routine Use Press the "stop" key to exit setup. Once the computer is set up, when you turn the computer on using the "start/stop" button you press the "mode" button to toggle through the functions, which include clock, trip odometer, speed, automatic timer, lap timer and temperature. To toggle through options within each mode, press the "set" key. For example, the temperature displays in Fahrenheit by default. Press the "set" key to toggle back and forth through Fahrenheit and centigrade displays. Consult the owners manual, available at Specialized.com, to obtain further information. right. Repeat this process until all five digits are entered as your existing mileage. (See figure 7) 4. Wheel Circumference Selection To set the circumference for the type of tires you are using, you can use Specialized's "Easy Calibration Mode" or measure your actual tire circumference by the rollout method. Two different tire diameters may be entered by using the computer's "Second Wheel Option." 10 Easy Calibration Mode Your SpeedZone Sport has been preprogrammed with the following 14 Specialized tire sizes: 26 X 1.0 26 X 1.25 26 X 1.5 26 X 1.9 26 X 1.95 26 X 2.0 26 X 2.1 When using Easy Calibration Mode, the SpeedZone Sport will display the tire size on its LCD display screen. (See figure 8) The Easy Calibration Mode is accessed by entering the Speed (SPEED) mode and holding down the "SET" button for three seconds. The display will now show the 26 X 2.2 650c X 20 700c X 20 700c X 23 700c X 26 700c X 32 700c X 38 Photo Courtesy: Pexels Hybrid bikes are often called "cross bikes" because they combine the characteristics of mountain, road, and touring bikes. They're ideal for gravel and dirt paths or paved roads and feature a number of gears to make climbing hills easier. Wheel size, gears, suspension, and brake type are four major factors to keep in mind when you're choosing a hybrid bike. Frame and handlebar shape are additional considerations that can impact comfort and durability. To help narrow down your choices, we've compiled the 10 best hybrid bikes.
